CDNA was prepared from a glandular pool of tissues from thyoid, parathyroid, adrenal, cortex and pineal gland. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCATATGGCC-3' and 3' adaptor sequence: 5'-ATTCTAGAGGCGACGACGACGC-3' and 3' adaptor sequence: 5'-ATTCTAGAGGCGGCGCGACATG-GT(30) BN-3' (where B = A, C, O, G, O, T). Average insert size 1.38 kb (range 0.60-3.5 kb). 15/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo Alto,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a DNA sequence encoding the light chain variable region of primate monoclonal antibody anti-human CD23 5EB. The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for IGE (FceRii/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds to human Fc gamma receptors and inhibite IGE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting induced IGE production for treating or preventing allergic, inflammatory and autoimmune conditions e.g. allergic rhinitis conjunctivitis, autoimmune hasmolytic anaemia, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

```

This is the nucleotide sequence of novel target plasmid Mandy. The plasmid includes an inactivated murine dihydrofolate reductase (DHFR) gene, the Escherichia coli beta-galactosidase gene, baculovirus DNA, a cassette comprising the promoter and enhancer elements from cytomegalovirus and SV40 virus, the E. coli clements from cytomegalovirus and SV40 virus, the E. coli clements from cytomegalovirus and SV40 virus, the E. coli clements from cytomegalovirus and SV40 virus, the E. coli clements from cytomegalovirus and SV40 virus, the E. coli clear and transposon Th5 heomycin phosphotransferase gene, an inactivated Salmonella typhimurium histidinol dehydrogenase (HisD) gene and transposon Th5 heomycin phosphotransferase (neo) gene and transposon Th5 neomycin phosphotransferase (neo) gene invention provides a novel method for integrating a desired invention provides a novel method for integrating a desired coll vita homologous recombination. This involves transfecting the cell vita handlogous recombination with the unique sequence which provides for homologous recombination with the unique sequence which provides for homologous recombination with the unique sequence which provides for monologous recombination with the unique sequence contains in the marker plasmid, and further comprising a desired DNA that is to be integrated into the mammalian cells, typically an the monologous recombination system utilises the neo gene as a dominant selectable marker. The neo gene is split into 3 sexons. Exon 3 is present on the marker plasmid and becomes integrated into the mammalian cells. Exon 3 is present on the marker plasmid and are separated by an intron into which at the targeting plasmid, and are separated by an intron into which at the targeting plasmid, and are separated by an intron into which at the targeting vertor with the integrated into vertor with the integrated by an intron into well the tenulation of integrated into vertor with the integrated by an intron into well the tenulation of integrated into vertor with t mammalian cells, and can be used to express any type of recombinant protein. The use of a triply spliced selectable marker means that all selected colonies arise from homologous recombination. In of the targeting vector with the integrated marking vector results in correct splicing of all 3 exons of the neo gene and expression of a functional neo protein. The method is applicable to all can e.9 addition, the number of colonies that need to be screened to identify high producer clones is reduced. An amplifiable gene be inserted on integration of the marking vector, so that when qene is targeted to this site, the gene is further enhanced by comprises homologous recombination using specific integration of DNA in mammals for selectable marker and target plasmids Example 1; Fig 10; 114pp; English lobuling amplification [mmnnod] Site

multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (1) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (1) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a human immunoglobulin light chain kappa variable region subgroup type I which is used in the construction of humanised anti-Fas antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 729 BP; 192 A; 200 C; 182 G; 155 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                constructs described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤

```

```
The invention relates to a preventive or treating agent for diseases caused by abnormality in Fas/Fas ligand system containing as the active component an antibody having as the light chain subunit a polypeptide containing residues 1-218 of one of 3, 239 residue amino acid sequences, or residues 1-451 of one of 3, 470 residue amino acid sequences, fully defined in the specification and having an activity of combining specifically with mammalian Fas and an activity of inducing apoptosis in a cell expressing Fas. The agent has immunosuppressive and antiallergic activity and is used for preventing and treating autoimmune diseases, allergy, atopy and others. The present sequence is that of a PCR primer, useful to the invention.
                                                                    anti-Fas antibody, used for preventing and

Claim 1; SEQ ID No 121; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABO\$4131-ABQ\$6305), and also encompasses polypeptides the inventical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens to compare the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens of compare the sequences of the invention. The invention and the use convertion antigen polynucleotides and polyneptides in diagnosing, treating, prognosing or preventing various ovary and/or breast related disorders. Such conditions include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune cophoritis, systemic lupus erythematosus, blood-related disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and conditions conditions or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the modulate ovarian antigen expression or activity. The polynucleotides may disease diagnosis, drug targeting and phenotyping. The present effections conditions or to prepare antibodies engely energing and phenotyping. The present effections conditions and page to the present effections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

The isotype of a MAD secreted by the human/human hybridoma HT was determined to be and kappa. Human MAb was purified, and the antigen recognised human MAb CLN"-IGM identified by western blotting.

The present invention relates to novel human monoclonal antibodies. The antibodies can bind to human Tumour Growth Factor-beta (TGF-beta) II receptor, resulting in the inhibition of the signal transduction of human TGF-beta into cells. The antibodies can be used for the prevention and treatment of diseases associated with the production of TGF-beta, such as tissue fibrosis in the lung, liver, skin, kidney or other tissues,
                                                                                                                                                                              240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    279 CCATCAAGGTTCAGCGGCAGTGGATCTGGGACAGATTTCACTCTCACCATCAGCAGCCTG 338
                                                                                                                                                                                                                                      The invention relates to a novel human antibody (I), preferably a human monoclonal antibody which binds to an activation inducible lymphocyte immunomodulatory molecule (AILIM). (I) is useful for modulating signal transduction into a cell mediated by ALLIM, for modulating proliferation of ALLIM-expressing cells, for modulating production of a cytokine from AILIM-expressing cells, and for inducing antibody-dependent cytotoxicity against AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells (I) is useful for treating or apoptosis of prophylaxis of delayed type allergy. (I) is useful for treating and preventing various diseases associated with AILIM-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              preventing various treases associated with Annia decorporation of the diseases. (1) is useful for suppression, advancement of the diseases. (1) is useful for suppression, prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis, allergic context-type dermatitis, chronic inflammatory dermatosis, systemic lupus erythematosus, insulin-dependent diabetes mellitus, psoriasis, autoimmune or allergic disorders, inflammation, graft versus host reaction, graft versus host disease, immune rejection, disorders caused by abnormal intestinal ulcerative colitis, pneumonia, hepatitis, nephritis, vasculitis, and pancreatitis. (1) induces no serious immunorejection due to antigenicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a kappa chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyte antigen (CTLA)-4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FRI-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune disease, diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human maning specific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibodies containing donor complementarity determining regions and non-human primate acceptor frameworks, having reduced immunogenicity in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Complementarity determining region; antibody; primate; immunogenicity; Old World ape; Old World monkey; antigen-binding affinity; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AGATGTGACATCCAGATGACCCAGTCTCCATCTTCCCTGTCTGCATCTGTAGGGGACAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 Grcaccarcacradecadecadrendes artracaacres radecades 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human antigenspecific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor
                                                                                                                                                                                                                                                                                                                          Antibodies containing donor complementarity determining regions and non-human primate acceptor frameworks, having reduced immunogenicity in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                fragment, has at least one of the following properties: acting on dendritic cells to produce IL-12 in the presence of LPS (lipopolysaccharide) and IPNgamma (interferon gamma); acting on dendritic cells to activate macurity of the dendritic cells with high G28-5 antibody; and activating CD95 expression with high G28-5 antibody against be cell line. Such antibodies or functional fragments can be used as immunoactivators, anti-tumour agents, immunosuppressants, and as remedies for autoimmune diseases, allergy or coagulation factor VIII inhibitors syndrome. This polynuclectide sequence represents a coding DNA sequence

Human immunoglobulin light chain variable region partial transcript.

```
A novel composition has been developed which comprises an immunoglobulin (IG) having an affinity constant (Ka) of at least 2 multiply 1000000000 M-1 for binding to a predetermined human antigen. The present sequence represents a human light chain variable region partial nuclectide sequence, 10CS kappa, which encodes an amino acid sequence from a claimed immunoglobulin that specifically binds human CD4. The anti-CD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These autoimmune reactions, inflammatory response and transplant rejection. Transgenic animals are capable of producing heterologous antibodies of funding isotypes by undergoing isotype switching. These animals produce a first IG type that is necessary for antigen-stimulated B-cell maturation and can switch to encode and produce one or more subsequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

AAV39212-41 represent functional transcripts of a human IgGKappa anti-CD4 antibody. The sequences are isolated from 5 different transgenic mouses hybridoma cell lines. The specification describes transgenic mones hybridoma cell lines. The specification describes transgenic mone human animals, especially a mouse, which are capable of producing a human heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a variable-diversity-junction (V-D-U) recombination. The transgenes include a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (Ig) light chain can segment. The gene segment and one constant region gene segment for an unit of a natioody can be used to treat reperfusion injury. CD4 binding antibodies are used to reduce undesirable autoimmune reactions, inflammatory responses and rejection of transplanted organs. The antibodies can reduce tissue damage and prolong survival in animal models of acute adult respiratory distress syndrome (ARDS) and cid induced lung injury. The antibodies can also be used for the treatment of vasculitis, septic shock, allergic reactions (e.g.
                                                                                                                                                                                                                                                                                   CD4 binding;
                                                                                                                                                                                                                                                           Transgenic animal; human heterologous antibody; transgene; isotype switching; neutrophil efflux; reperfusion injury; CD4 bindim; autofimnue reaction; inflammatory response; transplant rejection; acid induced lung injury; acute adult respiratory distress syndrome; ARDS; vasculitis; septic shock; allergic reaction; asthma;
                                                                                                                                                                                                                            Functional Kappa transcript isolated from transgenic cell line 10C5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         82.2%; Score 318.2; DB 19; Length 388; 88.9%; Pred. Sequence 15, Application US/09844684

Patent No. US20020142358A1

GENERAL INFORMATION:

APPLICANT: GEMINI SCIENCE, INC.

APPLICANT: LA JOLLA INSTITUTE FOR ALLERGY AND IMMUNOLOGY

TITLE OF INVENTION: HUMAN ANTI-CD40 ANTIBODIES AND METHODS OF MAKING SAME;

FILE REPERENCE: 21286/0276339

CURRENT APPLICATION NUMBER: US/09/844,684
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 ATGGACATGAGGGTCCCCGCTCAGCTCCTGGGCTCCTGCTGCTCTCGGCTCTCAGGTACC

Patent No. US200206620041

GENERAL INFORMATION:

APPLICANT: Taylor, Alexander H

TITLE OF INVENTION: Immunogenicity

TITLE OF INVENTION: Immunogenicity

FILE REFERENCE: P50770

CURRENT APPLICATION NUMBER: US/09/905,243

CURRENT FILING DATE: 2001-07-16

PRIOR APPLICATION NUMBER: 09/300,970

PRIOR FILING DATE: 1999-04-28

NUMBER OF SEQ ID NOS: 97

SOFTWARE: FastSEQ for Windows Version 3.0

Sequence 3158, Application US/09042353

Patent No. 6255458

GENERAL INFORMATION:
APPLICANT: Lonberg, Nils
TITLE OF INVENTION:
Producing Heterologous Antibodies
TITLE OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
RPLICATION NUMBER: US/09/042,353
FILING DATE: 13-MAR-1998
CLASSIPICATION: 800
                                                                                                                                                                                                                                                                                                                                                             361 GGCCAAGGGACCAAGGTGGAAATCAAA 387
